Medical device innovations are fundamentally transforming health care, providing new solutions to existing standards, and changing the way treatments are administered. With the convergence of new scientific and medical breakthroughs, the speed of innovation is accelerating and mistakes at any point in the development process can have devastating results on schedules, products, and businesses. At **Synaptic**, we provide the highest quality technical and regulatory services to assist our clients with issues related to medical devices, such as mechanical testing, biomechanical research, and finite element analysis. We provide complete and comprehensive analyses and dedicate the highest level of expertise to your case from the very start.

Synaptic Analysis Consulting Group Inc. performs biomechanical analyses of orthopaedic medical devices, regenerative medicine systems and tissue therapies, and provides expert witness services on issues related to patent infringement and medical device failures. We are located in the pacific northwest in Vancouver BC. We routinely work on both coasts of Canada and the USA and we have developed cost-effective ways to work across these wide geographic areas.

Design Support:

We evaluate complex design issues and provide technical and regulatory services

Patent Infringement Analysis:

We interpret technical patent specifications and claims and provide testimony for invalidity analyses

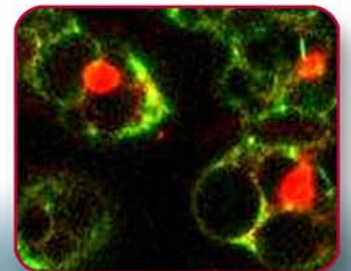

Failure analysis:

We investigate the root failure of orthopaedic medical devices and provide engineering support in litigation

Investor Analysis:

We provide technical analyses of orthopaedic medical devices and tissue engineering therapies
